

**Public Health Association of New York City (PHANYC)**  
**2005 Agenda for a Healthy New York**  
**New York City Primary Elections, September 2005**

***SURVEY RESULTS***

<b>Objective/ Action Step</b>	<b>Description</b>	<b>% of Responding Mayoral Candidate In Support</b>
<i>Objective 1</i>	Increase the proportion of NYC high school students who graduate from high school	100%
Action Step	New York State should fully and promptly fund New York City schools as mandated by the Campaign for Fiscal Equity's successful lawsuit	88%
Action Step	Implement the recommendation of NYC Council Commission on the Campaign for Fiscal Equity to reduce class size in NYC high schools to 17 students per teacher	75%
Action Step	Identify and expand existing effective dropout prevention programs	88%
<i>Objective 2</i>	Establish comprehensive age-appropriate health programs in all city schools that include nutrition and physical activity, health education and sexuality education	88%
Action Step	Enforce city and state mandates for health and sex education in public schools	88%
Action Step	Create school-based health centers in all NYC public high schools	75%
Action Step	Develop and implement a comprehensive sexuality and HIV education program for NYC schools	75%
<i>Objective 3</i>	Increase the availability and affordability of healthy foods including fruits, vegetables, whole grains and low fat dairy products	88%
Action Step	Eliminate soda, candy, and foods high in fat and sugar from all NYC public schools and promote 1% milk, water, fresh fruits and vegetables, and whole grain breads	75%
Action Step	Increase access to healthy food by expanding farmers markets and promoting new relationships among local agricultural producers and institutional, commercial and individual consumers	88%
Action Step	Facilitate enrollment for those eligible for Food Stamps by simplifying the application form and by making it available online and at food distribution sites	88%
<i>Objective 4</i>	Increase opportunities for physical activity	100%
Action Step	Enforce state mandates for physical education in city schools	88%
Action Step	Create and improve safe and accessible public spaces such as playgrounds, city parks, public schools, and walking and recreation areas	100%
Action Step	Develop workplace physical activity programs for all city workers	63%
<i>Objective 5</i>	Increase access to preventive reproductive and sexual health care	88%
Action Step	Expand availability of pregnancy-prevention counseling and contraception including emergency contraception and condoms at community organizations, hospitals, health clinics, and high schools	88%
Action Step	Conduct intensive outreach on prenatal care and contraceptive use to high risk groups and increase the capacity of home visiting programs to serve more pregnant women and new parents	88%
Action Step	Fully fund existing and develop new reimbursement mechanisms in New York State to support the work of reproductive health providers who provide women's wellness services and to allow for increased enrollment in PCAP, FPBP, FPEP, SCHP, and FHP	88%
<i>Objective 6</i>	Reduce the barriers to getting timely and effective primary and preventive care	88%
Action Step	Develop comprehensive city-wide programs for management and control of asthma and diabetes	88%
Action Step	Provide financial support to community health efforts in NYC, and expand and improve services	88%
Action Step	Oppose state and federal cuts to Medicaid that reduce access to primary and preventive care	88%

**MAYOR'S RACE:**

<b>Name of Candidate</b>	<b>Objective 1: Increase Graduation Rates</b>	<b>NYS Funding of all NYC Schools</b>	<b>Reduce Class Size to 17 Students Per Teacher</b>	<b>Expand Drop-out Prevention Programs</b>	<b>Objective 2: Age-Appropriate Health Programs in NYC Schools</b>	<b>Enforce Mandates for Health &amp; Sex Ed. in NYC Schools</b>	<b>School-based Health Centers</b>	<b>Health &amp; Sexuality Ed. Name of Candidate	Question 1: In your view, what is the most important public health issue facing New York City?	Question 2: If you are elected, what will be your two or three top priorities with respect to health?
Michael Bloomberg	The biggest issue we face as New Yorkers is access to affordable healthcare. While we have made tremendous progress during the past four years by enrolling over 900,000 people in public healthcare programs too many New Yorkers still die prematurely from preventable causes.	Early detection and preventative care are key to good health. During my term I have approved and funded \$1.2 billion in Health & Hospital Corporation (HHC) capital expenditures and have allocated the funds necessary to ensure that every HHC acute care facility has the diagnostic and imaging equipment necessary to provide first-class care.
Seth A. Blum	The proper and complete nourishment, care and protection of our young people in the schools and with that, the amount of education being given about our health within families and communities.	Protect women in spousal abuse situations and educate them about pre-natal care. Eliminate unhealthy foods and drinks in the schools and further education about healthy eating and exercise. Help those without health insurance get coverage for their medical needs and provide further education about their health issues.
Christopher X. Brodeur	I ride a bike 365 days a year and want to put more of NYC onto bikes while putting bike lanes on all avenues which double as EMERGENCY VEHICLE LANES so no ambulance ever gets stuck in traffic again. I have plans to eliminate ALL smoking, promote vegetarianism, reduce car traffic, and thousands of other specifics.	That's a tough one, because some of my plans are more quickly doable than others. EX: my mandatory organ donation (which says you donate your organs unless you fill out paperwork prior) (ask for details) will save hundreds of thousands of lives is easier, but getting more people to eat veggie dogs etc will be harder and save more lives.
Theo Chino	NO RESPONSE	NO RESPONSE
Fernando Ferrer	1 in 4 New Yorkers under the age of 65 is uninsured, mostly low income working adults, children, and the elderly. However, many of these 1.8 million uninsured individuals are eligible for various City, State and federal programs. We must do more to ensure these vulnerable New Yorkers are able to get the help they need.	My first priority will be to get the New Yorkers who are currently eligible for health care coverage on to a health plan. We must do all we can to protect these vulnerable New Yorkers. My second priority will be to simplify and streamline the healthcare renewal process so that we could retain people who are currently in the program
C. Virginia Fields	The most important public health issue facing New York City is the lack of access to affordable, quality healthcare services for all New Yorkers, and I am equally as concerned about the growing divide that we see in health outcomes among communities of color. We must reduce the number of uninsured, many of whom are working women, in NYC.	My top two priorities on health will be to ensure that all New York City residents have access to affordable, quality healthcare and to eliminate health disparities, particularly for those diseases that are preventable and/or treatable such as asthma, diabetes and HIV/AIDS.
Gifford Miller	NO RESPONSE	NO RESPONSE
Thomas Ognibene	NO RESPONSE	NO RESPONSE
Audrey Silk	The definition of "public health." The city's only business in public health is communicable diseases. All matters related to individual legal lifestyle choices and personal control are not the business of government, and therefore not "public health."	The NYC Dept. of Health wastes funds on tracking lifestyle habits of New Yorkers instead of committing it to addressing more immediate threats (like the flu). I would appoint a new commissioner and drastically reorganize spending.
Anthony Weiner	1.8 million New Yorkers – almost a quarter of the City – is without health insurance. More that 900,000 of the uninsured have jobs. I will modernize Medicaid enrollment, reducing costs, and enabling the City to enroll more New Yorkers. I will also make it easier for small businesses to join together to purchase health coverage for employees.	Enrolling more uninsured New Yorkers through Medicaid and private plans designed for small businesses employees. Reducing the number of children – roughly 500,000 last year – that depend food kitchens for a meal by enrolling more families in the food stamps program.

Name of Candidate	Question 1: In your view, what is the most important public health issue facing New York City?	Question 2: If you are elected, what will be your two or three top priorities with respect to health?
Brian Ellner	New York City still has the oldest, largest, and most heterogeneous HIV epidemic in the western world, and we need to recommit attention and resources to the problem to stop the recent spike in infection rates, particularly evident among young gay men and African-America women.	In the absence of strong leadership in Washington we must take action in our communities to increase the number of New Yorkers with health insurance, fight asthma and diabetes, particularly amongst our children, and reduce disparities in health care and coverage by race, ethnicity and socioeconomic status.
Adriano Espaillet	The most important public health issue facing New York City is lack of affordable health care. Too many New Yorkers are either uninsured or underinsured. All public officials must work together to find ways to deal with this crisis.	If elected, my top priority will be to make healthcare more accessible to low-income New Yorkers. I will work to promote existing programs as well as push for the development of new programs for the uninsured. I will also work to create more health care clinics in our schools for our children. Finally, I am very concerned about the cost of prescription drugs in our city. As Borough President, one of my first acts will be establish a section on the Borough President's website that allows individuals to look for less expensive drugs abroad.
Margarita Lopez	The most important public health issue facing New Yorkers is the inability of middle and low income New Yorkers to obtain health insurance. I believe that providing proper infrastructure to the public hospitals, such as new laboratories and other state-of-the-art technologies, is critical to ensuring that all New Yorkers can receive quality health care—those with all levels of private insurance, those who have Medicaid, and those who have no insurance at all.	I will work to implement a policy requiring that contractors involved in New York City projects, as well as businesses that benefit from public funding, provide health care for their employees. My office will also set up conditions in the ULURP procedures, which require that development plans include health insurance for employees. I will also continue to use capital dollars to fund HIV/AIDS, substance abuse, mental health and prenatal programs.
Carlos Manzano	<ol style="list-style-type: none"> <li>1) HIV/AIDS treatment facilities and access to them</li> <li>2) Emergency room availability for treatments for all communities</li> <li>3) Pre-natal and newborn care for all who need it</li> </ol>	<ol style="list-style-type: none"> <li>1) Health and sex education</li> <li>2) Increase in funding for health organizations that secure the uninsured and underprivileged</li> </ol>
Stan Michels	Providing quality health care to those who cannot afford or who do not qualify for insurance, such as the working poor and the undocumented, and the resultant demands placed on both the public and private health systems.	<p>My top three priorities will be to:</p> <ol style="list-style-type: none"> <li>1. Make sure that the City fully implements the Childhood Lead Poisoning Prevention Law</li> <li>2. Advocate for adequate health and mental health services for all school children</li> <li>3. Increase the enrollment in the Child Health Plus and Family Health Plus programs</li> </ol>
Eva Moskowitz	The single most important public health issue facing New York City is the high percentage of uninsured New York City residents. The public and private sectors must join forces to curb this problem.	<ol style="list-style-type: none"> <li>1. Increase number of insured city residents</li> <li>2. Improve health of City residents by increasing number of opportunities for physical activity and healthy eating and improving environmental conditions that affect health such as air quality.</li> <li>3. Improve sex and health education</li> </ol>
Bill Perkins	Making health care coverage affordable for all New Yorkers. Health care must be a right not a privilege. It is unconscionable that right now more than 2.8 million New Yorkers lack health insurance, many of them children. And as the price of health care continues to rise, the problem is getting worse. We must insure all New Yorkers.	Making health care more accessible for all New Yorkers, particularly children. We must help every child get a healthy start by fighting infant mortality, investing in early childhood care, reducing the cost and barriers to preventive care and increasing the availability of healthy food and physical education.
Barry Popik	The most important health issue is the affordability of health care. Too many New Yorkers are uninsured! The rich can afford health care and the poor have health care, but the middle class should be able to afford it, too. Because real estate costs are increasing, people are skimping on health care.	<ol style="list-style-type: none"> <li>1. Eliminate Medicaid fraud (see NY Times coverage), but make sure that New Yorkers have health care.</li> <li>2. Consult with the community boards about community health problems, such as pockets of "asthma alleys."</li> <li>3. Educate the public about community health providers and programs</li> </ol>
Scott Stringer	Asthma rates in East Harlem are among the worst in the country. A child living there is five times more likely to be hospitalized for asthma than one living just a couple miles south in the Upper West Side – yet six of Manhattan's 8 bus depots are located in Harlem and the MTA continues to purchase land in this vicinity for use as bus parking lots.	I will continue my campaign to get rid of dirty diesel buses. I will implement a program to provide all new mothers with Child Health Plus enrollment forms before they leave the hospital. And I will start a Youth Sports League for elementary and middle school students. I'll ensure that kids have priority on Manhattan's limited playing field space.
Keith Wright	In Manhattan, particularly in communities of color, AIDS and asthma are major concerns.	Enhance public education programs focused on AIDS, prostate and breast cancers and obesity. Advocate for thirty minutes of daily exercise for municipal employees. Help increase awareness of EPIC program for seniors and Child and Family Health Plus, insurance programs for working families.

% No Position	0%	33%	33%	0%	0%	0%	0%	0%	0%	0%	0%	0%

Name of Candidate	Question 1: In your view, what is the most important public health issue facing New York City?	Question 2: If you are elected, what will be your two or three top priorities with respect to health?
Marty Markowitz	Affordability. With premiums rising through the roof and too many businesses offering inadequate coverage, working and middle-class Brooklynites are struggling to keep their families healthy. Until there is a national solution, I will continue to advocate affordable healthcare and work with City Hall to support local programs that make a difference.	The number one priority is to ensure that every Brooklynite has adequate health coverage, which means we need a change in our leadership in Washington. I am also committed to eliminating the inexcusable disparities in health coverage that affect immigrants and people of color, and to combating obesity, diabetes, and asthma.
Gloria Mattera	The high number of uninsured NYC residents, especially in Brooklyn, is the most serious public health issue facing this city. The uninsured are at higher risk for complications from chronic illnesses and infectious diseases that increase mortality and strain our under-funded public health and hospital system.	I would spearhead the development of a multi-agency approach (Bd of Ed., Dept of Health, Div. of Youth Services, Parks & Recreation) to combating childhood obesity and related illnesses with a coordinated effort to increase the amount of recreational facilities and green space in all neighborhoods along with increasing physical education facilities and healthy food choices in schools and neighborhoods.
Gary Popkin	Everyone has a right to health care, meaning that the government must not interfere with people's pursuit of any procedure or medicine they desire. It is not up to the government to give people permission to use any procedure or medicine, not should a person have to get "permission" from a health professional to do so (a "prescription").	As Borough President, I will seek to implement health-care rights in Brooklyn. I will ask the mayor to cease arresting Brooklynites for medicating themselves in the absence of government approval, and give me all the money saved by doing so. I will return the money to Brooklynites through lower taxes and lower fines.

Name of Candidate	Question 1: In your view, what is the most important public health issue facing New York City?	Question 2: If you are elected, what will be your two or three top priorities with respect to health?
John Luisi	We must begin by properly educating our children and training them in healthy lifestyles, including nutrition and exercise. Healthy minds need healthy bodies. Proper access to quality healthcare for families is a necessity to reverse the cycle deterioration of the public's health.	I will work with the recognized leaders in this area to implement a plan of "education coupled with action". Healthy eating (our public school cafeterias are a huge "restaurant", and only healthy choices should be offered) is a must, as is proper physical activity. Kids today are sedentary, and do not "learn" to lead an active lifestyle.
James Molinaro	NO RESPONSE	NO RESPONSE
